

9elements nils binder

Uit dortmund

3 units

- communicatie design
- Product development
- Web development

Ze komen allemaal samen en kijken wat de mogelijkheden zijn.

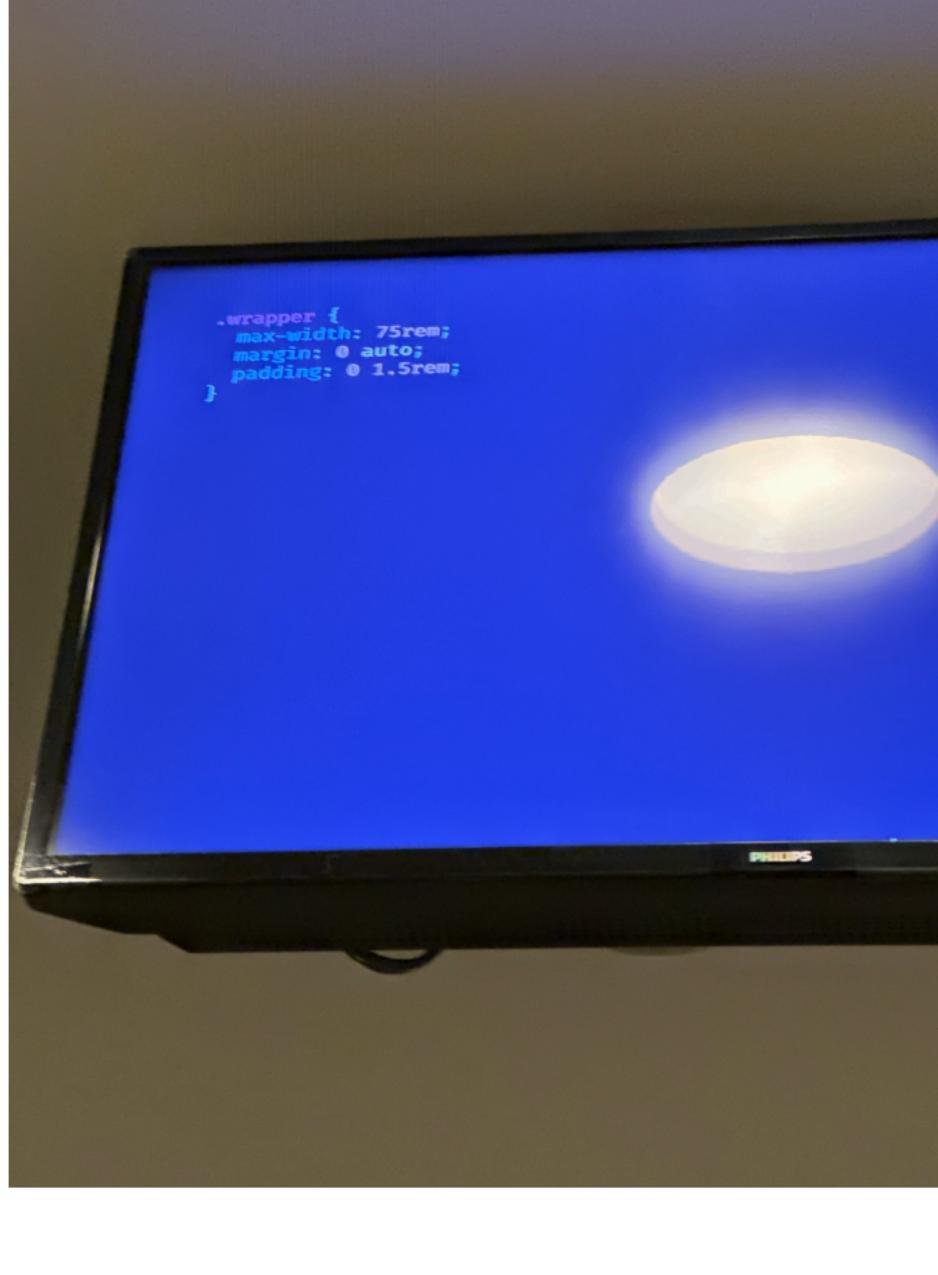

20 jaar geleden wilde ze 3elements heten maar dat was al bezet.

Alles over een wrapper.

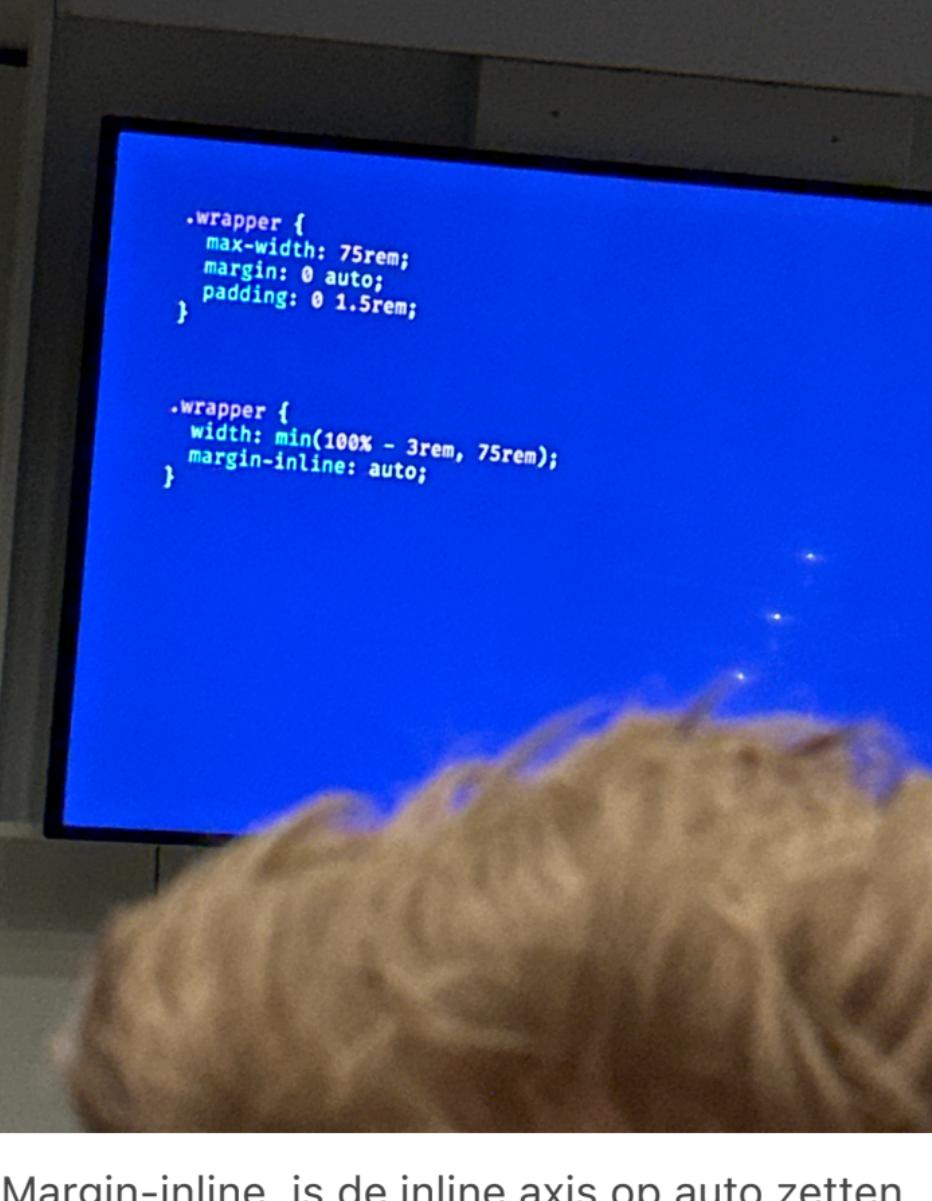

De wrapper is de max van de content

Voegt padding toe waar nodig is

En het centreert de content

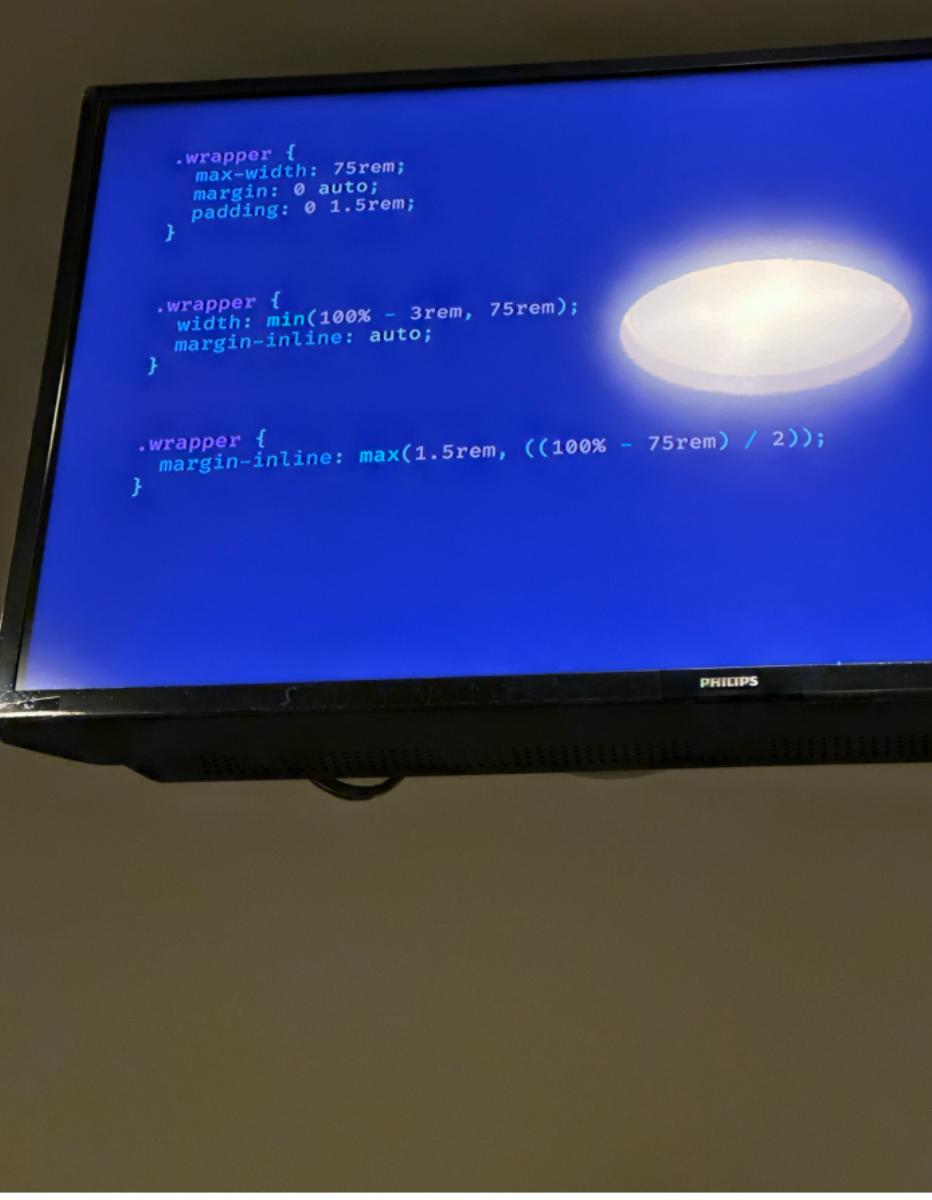

```
.wrapper {  
    max-width: 75rem;  
    margin: 0 auto;  
    padding: 0 1.5rem;  
}
```

```
.wrapper {  
    max-width: 75rem;  
    margin: 0 auto;  
    padding: 0 1.5rem;  
  
.wrapper {  
    width: min(100% - 3rem, 75rem);  
    margin-inline: auto;  
}
```

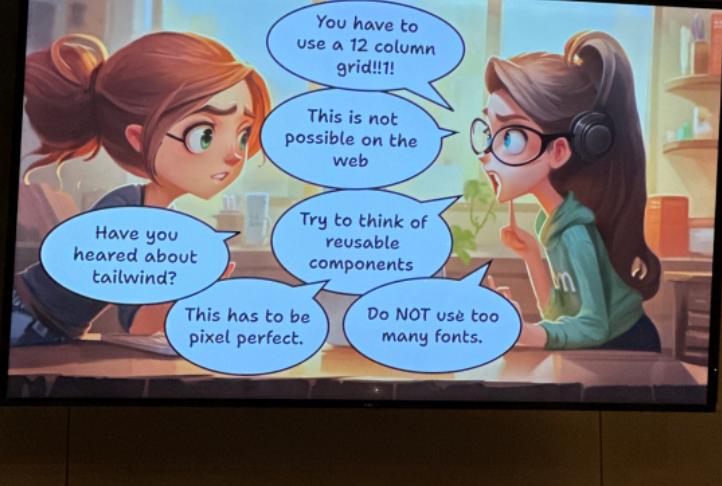

Margin-inline, is de inline axis op auto zetten.

```
.wrapper {  
    max-width: 75rem;  
    margin: 0 auto;  
    padding: 0 1.5rem;  
}  
  
.wrapper {  
    width: min(100% - 3rem, 75rem);  
    margin-inline: auto;  
}  
  
.wrapper {  
    margin-inline: max(1.5rem, ((100% - 75rem) / 2));  
}
```

```
.wrapper {  
  max-width: 75rem;  
  margin: 0 auto;  
  padding: 0 1.5rem;  
  
.wrapper {  
  width: min(100% - 3rem, var(--wrapper-max, 75rem));  
  margin-inline: auto;  
}  
  
.wrapper {  
  margin-inline: max(1.5rem, ((100% - var(--wrapper-max, 75rem)) / 2));  
}
```

Waarom designen we met witruimte?

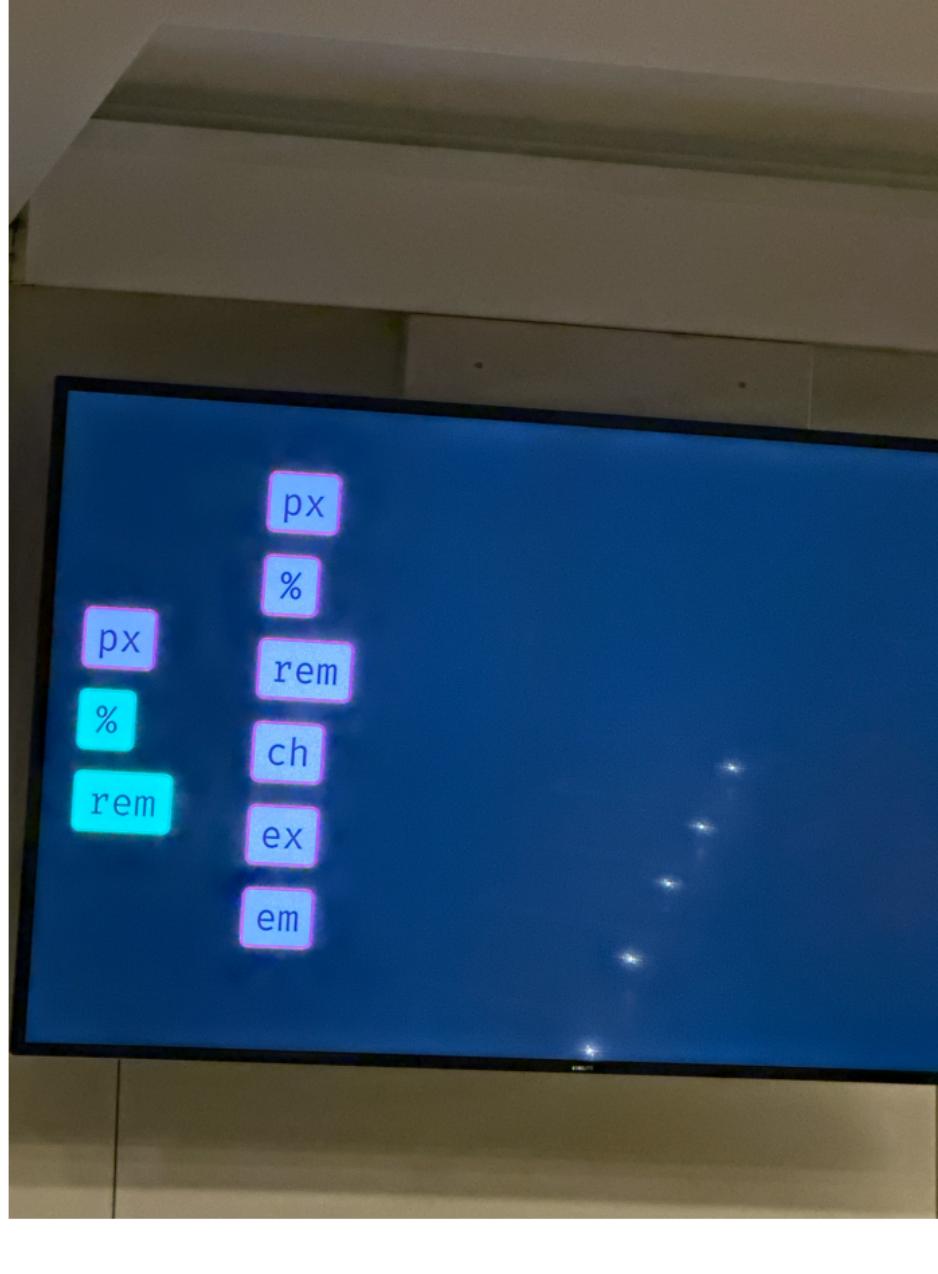

Voorheen ging er via photoshopped een website gedesigned worden. Te ingewikkelde

berekeningen.

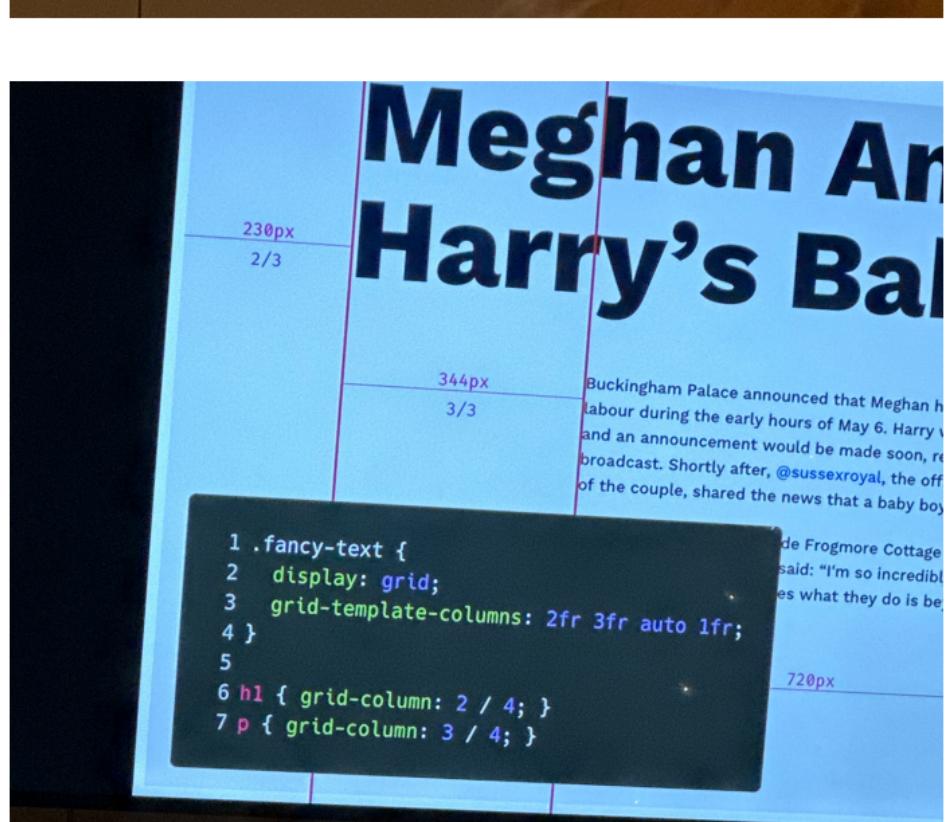

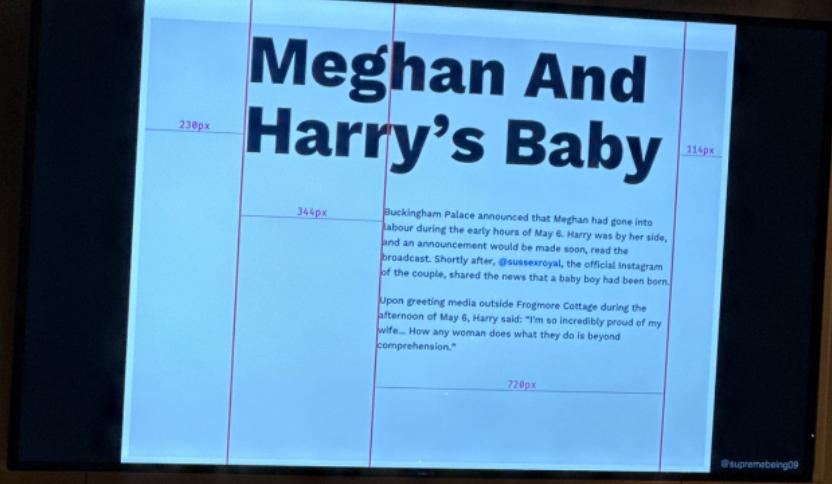

Figma

- px
- %
- Rem
